The screenshot shows a PostgreSQL Query Editor window titled 'atlete/postgres@PostgreSQL 13'. The 'Query Editor' tab is active, displaying a SQL query to create a table named 'customer'. The query is as follows:

```
2  custno varchar(10) NOT NULL,  
3  custname varchar(30) NOT NULL,  
4  address varchar(30) NOT NULL,  
5  Internal varchar(1) NOT NULL,

8  city varchar(15) NOT NULL,  
9  state varchar(2) NOT NULL,  
10 zip varchar(5) NOT NULL,  
11 CONSTRAINT custno_ PRIMARY KEY (custno)  
12 );

```

Below the query editor, the 'Messages' tab is active, showing the output: 'CREATE TABLE' and 'Query returned successfully in 71 msec.'

1. Hanya ada satu tabel yang saling berhubungan. Table yang berhubungan adalah tabel facility dengan tabel location dimana table facility merupakan parent dari tabel location, karna tabel location mengambil data dari tabel facility.

2. alter table location

add constraint _locno

foreign key (facno) references facility (facno)

The screenshot shows a PostgreSQL query editor interface. At the top, the connection is identified as 'atlete/postgres@PostgreSQL 13'. Below this, there are tabs for 'Query Editor' and 'Query History'. The 'Query Editor' tab is active, displaying a three-line SQL command:
1 alter table location
2 add constraint _locno
3 foreign key (facno) references facility (facno);
Below the query editor, there are tabs for 'Data Output', 'Explain', 'Messages', and 'Notifications'. The 'Messages' tab is selected, showing the output: 'ALTER TABLE' followed by 'Query returned successfully in 60 msec.'

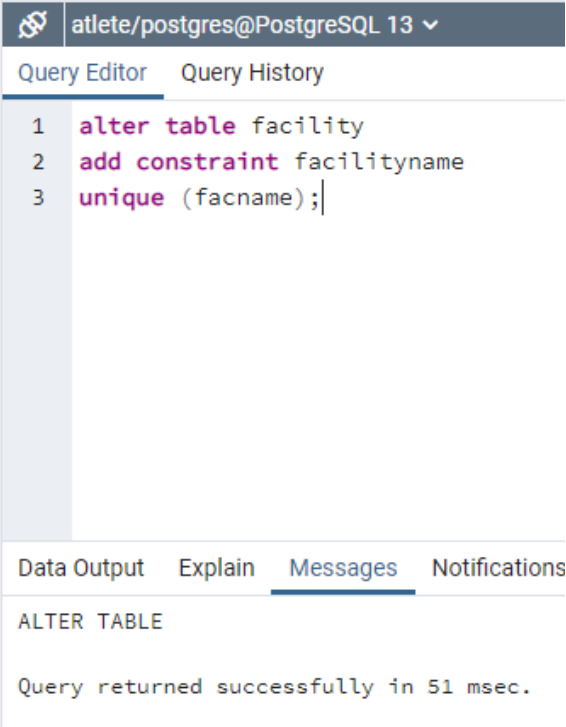

```

2 add constraint _locno  
3 foreign key (facno) references facility (facno);

3. yang saya ketahui, null tidak boleh digunakan dalam foreign key. Saya ingin menjelaskan mengapa foreign key mungkin perlu nol atau mungkin perlu unik atau tidak unik. Pertama, ingat foreign key hanya mengharuskan nilai di bidang itu harus ada terlebih dahulu di tabel yang berbeda (tabel induk). Itu semua adalah definisi FK. Null menurut definisi bukanlah nilai. Null artinya kita belum tahu berapa nilainya.

4. alter table facility

Add constraint facilityname

Unique (facname);

The screenshot shows a PostgreSQL Query Editor window. The title bar indicates the user is 'atele/postgres@PostgreSQL 13'. The 'Query Editor' tab is active, displaying a SQL query with line numbers 1, 2, and 3. The query is: `1 alter table facility`, `2 add constraint facilityname`, `3 unique (facname);`. Below the query editor, the 'Messages' tab is active, showing the output: 'ALTER TABLE' and 'Query returned successfully in 51 msec.'

```
1 alter table facility
2 add constraint facilityname
3 unique (facname);
```

ALTER TABLE

Query returned successfully in 51 msec.
